FUNKSIONIMI I SISTEMIT FEDERATIV NË SHBA
ФУНКЦИОНИРАЊЕТО НА ФЕДЕРАЛНИОТ СИСТЕМ ВО САД
THE FUNCTIONING OF THE FEDERAL SYSTEM IN THE USA

Abstract

The end of the so-called Cold War marked the beginning of globalist processes and the construction of a new world order, where the United States of America plays a leading role, which, with its policy, is dictating the course of this process. Founded as a weak confederal union of thirteen states, America today represents a military, economic, and political superpower, a democratic state based on federal unity and complete ethnic, cultural, and linguistic diversity where citizens of different ethnic, linguistic, and religious backgrounds coexist, with the aim of creating a contemporary civilization and general well-being.

The American system represents the main model of a stable and sustainable modern democracy. Established by the Constitution of 1787, the American system of government has survived political changes over the centuries, has developed in parallel with time and currently operates as a functional democracy, based on the separation and mutual control of powers, the presidential system, federalism, civil liberties and rights, and a range of other democratic and political values that ensure the stability of American democracy.

Keywords: Cold War, United States of America, the Constitution, government, Federal system
